GENERAL INFORMATION:

APPLICANT: Sim, Gek-Kee

APPLICANT: Yang, Shumin

APPLICANT: Yang, Shumin

APPLICANT: Wonderling, Ramani S.

ITILE OF INVENTION: CANINE AND FELINE IMMUNOREGULATORY PROTEINS, NUCLEIC TITLE OF INVENTION: ACID MOLECULES, AND USES THEREOF

FILE REFERENCE: IM-2-C2

CURRENT PILING DATE: 1999-12-01

EARLIER APPLICATION NUMBER: 09/322,409

EARLIER APPLICATION NUMBER: 60/087,306

EARLIER APPLICATION NUMBER: 60/087,306

EARLIER PILING DATE: 1998-05-29

NUMBER OF SEQ ID NOS: 174

SOFTWARE: Patentin Ver. 2.0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     US-09-451-527-81

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

The invention relates to canine IL-4, canine or feline Flt-3 ligand, canine or feline CD40, canine or feline CD154 (CD40 CC ligand), canine IL-5, canine IL-13, feline interferon-alpha (IFN-alpha) CC and feline granulocyte macrophage colony-stimulating factor (GMCSF), and CC nucleotides which encode these immunoregulatory proteins. The proteins, CC their associated nucleic acids, specific antibodies and inhibitors may be used as vaccines for therapeutic or prophylactic regulation of an immune cresponse in animals (particularly cats, dogs, horses and humans). They CC may be used to treat autoimmune or infectious diseases including CC allergies, tumours, inflammation and graft rejection, and to increase the cresponse from a co-administered antigen. The nucleotide sequences can CC also be used for the recombinant production of a protein, while CC nucleotide fragments are useful as probes, as amplification primers and CC as sources of inhibitory therapeutics (e.g., antisense oligonucleotides). The proteins may be used to raise antibodies and to screen for modulators of activity, while the antibodies may be used in detection, and in drug
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Nucleic acids encoding immunoregulatory proteins from cats or dogs, useful for treating or preventing e.g. tumors or autoimmune disease

                                                                                                                                                                                        US-10-787-382-5 (1-134) x AAZ55549 (1-402)
                                                                                                                                                                                                                                                                                                                                                                                     CC interleukin-5 (II-5). The invention relates to canine II-4, canine or feline Flt-3 ligand, canine or feline CD40, canine or feline CD154 (CD40 ligand), canine II-5, canine II-13, feline interferon-alpha (IFN-alpha) can feline granulocyte macrophage colony-stimulating factor (GMCSF), and could be which encode these immunoregulatory proteins. The proteins, their associated nucleic acids, specific antibodies and inhibitors may be used as vaccines for therapeutic or prophylactic regulation of an immune cresponse in animals (particularly cats, dogs, horses and humans). They may be used to treat autoimmune or infectious diseases including allergies, tumours, inflammation and graft rejection, and to increase the cresponse from a co-administered antigen. The nucleotide sequences can also be used for the recombinant production of a protein, while cas ources of inhibitory therapeutics (e.g., antisense oligonucleotides). The proteins may be used to raise antibodies and to screen for modulators of activity, while the antibodies may be used in detection, and in drug

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             5
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  र्
                                                                                   CC Sequences AAZ55546-Z5551 represent cDNA sequences encoding canine CC interleukin-5 (II-5). The invention relates to canine II-4, canine or CC feline Flt-3 ligand, canine or feline CD40, canine or feline CD154 (CD40 ligand), canine II-5, canine II-13, feline interferon-alpha (IFN-alpha) CC and feline granulocyte macrophage colony-stimulating factor (GMCSF), and CC nucleotides which encode these immunoregulatory proteins. The proteins, CC their associated nucleic acids, specific antibodies and inhibitors may be used as vaccines for therapeutic or prophylactic regulation of an immune CC may be used to treat autoimmune or infectious diseases including CC allergies, tumours, inflammation and graft rejection, and to increase the CC response from a co-administered antigen. The nucleotide sequences can CC also be used for the recombinant production of a protein, while CC nucleotide fragments are useful as probes, as amplification primers and CC nucleotide fragments are useful as probes, as amplification primers and CC factivity, while the antibodies may be used in detection, and in drug
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Nucleic acids encoding immunoregulatory proteins from cats or dogs, useful for treating or preventing e.g. tumors or autoimmune disease.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequences AAZ55546-Z5551 represent cDNA sequences encoding canine CC interleukin-5 (II-5). The invention relates to canine II-4, canine or feline Flt-3 ligand, canine or feline CD40, canine or feline CD154 (CD40 CC ligand), canine II-5, canine or feline CD40, canine or feline CD154 (CD40 CC ligand), canine II-5, canine II-13, feline interferon-alpha (IFN-alpha) CC and feline granulocyte macrophage colony-stimulating factor (GMCSF), and CC nucleotides which encode these immunoregulatory proteins. The proteins, CC their associated nucleic acids, specific antibodies and inhibitors may be used as vaccines for therapeutic or prophylactic regulation of an immune cresponse in animals (particularly cats, dogs, horses and humans). They CC may be used to treat autoimmune or infectious diseases including CC allergies, tumours, inflammation and graft rejection, and to increase the CC response from a co-administered antigen. The nucleotide sequences can CC also be used for the recombinant production of a protein, while CC nucleotide fragments are useful as probes, as amplification primers and CC as sources of inhibitory therapeutics (e.g., antisense oligonucleotides). The proteins may be used to raise antibodies and to screen for modulators CC of activity, while the antibodies may be used in detection, and in drug CC contents and in drug therefore the contents are useful as probes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Nucleic

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention provides the protein and coding sequences of the canine interleukin-5 (IL-5) protein. This can be used to treat allergies, cancer and inflammatory reactions in dogs. The present sequence is one version of the IL-5 coding sequence shown in the specification
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence 405 BP; 131 A; 77

The invention relates to canine IL-4, canine or CC feline Flt-3 ligand, canine or feline CD40, canine or feline CD154 (CD40 CC ligand), canine IL-5, canine IL-13, feline interferor—alpha (IFN-alpha) CC and feline granulocyte macrophage colony-stimulating factor (GMCSF), and CC nucleotides which encode these immunoregulatory proteins. The proteins, CC their associated nucleic acids, specific antibodies and inhibitors may be used as vaccines for therapeutic or prophylactic regulation of an immune CC response in animals (particularly cats, dogs, horses and humans). They CC may be used to treat autoimmune or infectious diseases including CC allergies, tumours, inflammation and graft rejection, and to increase the CC response from a co-administered antigen. The nucleotide sequences can CC also be used for the recombinant production of a protein, while CC nucleotide fragments are useful as probes, as amplification primers and CC as sources of inhibitory therapeutics (e.g., antisense oligonucleotides). The proteins may be used to raise antibodies and to screen for modulators CC of activity, while the antibodies may be used in detection, and in drug CC content in the content of the proteins may be used to raise antibodies and to screen for modulators CC content in the content of the proteins may be used to raise antibodies and to screen for modulators CC content in the content of the proteins may be used in detection, and in drug CC content in the content of the proteins of the proteins may be used in detection, and in drug content in the content of the proteins may be used to raise antibodies and to screen for modulators CC content in the proteins may be used in detection, and in drug content in the content of the proteins may be used in detection.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   문
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ğ
                                                                                       CC interleukin-5 (IL-5). The invention relates to canine IL-4, canine or feline Flt-3 ligand, canine or feline CD40, canine or feline CD154 (CD40 creatine); canine IL-5, canine IL-13, feline interferon-alpha (IFN-alpha) cand feline granulocyte macrophage colony-stimulating factor (CMCSP), and concludes which encode these immunoregulatory proteins. The proteins, their associated nucleic acids, specific antibodies and inhibitors may be used as vaccines for therapputic or prophylactic regulation of an immune cresponse in animals (particularly cats, dogs, horses and humans). They may be used to treat autoimmune or infectious diseases including allergies, tumours, inflammation and graft rejection, and to increase the cresponse from a co-administered antigen. The nucleotide sequences can also be used for the recombinant production of a protein, while case sources of inhibitory therapeutics (e.g., antisense oligonucleotides). The proteins may be used to raise antibodies and to screen for modulators of activity, while the antibodies may be used in detection, and in drug carefular.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Nucleic acids encoding immunoregulatory proteins from cats or dogs, useful for treating or preventing e.g. tumors or autoimmune disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Canine mature interleukin-5 (IL-5) cDNA complement.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  AAZ55551;

This invention describes a novel nucleic acid vaccine for preventing and curing human and pork cysticercosis. The invention involves the formation of a eukaryotic expression plasmid from fuelon transcript expression unit consisting of three protective antigen genes (cC1, cC3 and cC4) of pig tenial cysticercus and coexpression unit of related cell factor gamma interferon (IFN-gamma) and pork interleukin 5 (IL-5)] genes. The production and purification process of said nucleic acid vaccine is
                                                                                                                                                                                                                                                                                                   Sus scrofa.
                                                                                                                                                                                                                                                                                                                       Pig; vaccine; cyst1

CO vine IL-5 or IL-12 are used to treat and/or prevent infections in CC livestock (esp. cows and sheep), particularly where the animals are CC stressed, e.g. during transport. IL-5 and IL-12 can also be used as CC adjuvants in vaccines for veterinary use (partic. weakly immunogenic CC subunit or synthetic peptide vaccines). They may also be used to treat CC cancer, immunosuppression and allergy, to enhance/suppress the CC interleukin can be delivered from constructs or delivery cells and CC infection. The interleukins are immunopotentiators, especially IL-5 CC infection. The interleukins are immunopotentiators, especially IL-5 CC infection of early haematopoietic progenitor cells and generation CC promotes growth of early haematopoietic progenitor cells and generation CC fortoxic cells from thymocytes, also it stimulates production and CC induces production of IgM and IgA (in synergism with bacterial endotoxin). IL-12 CC induces production of gamma-interferon by, and proliferation of, T and MX CC cells and increases the (non-) specific cytolytic lymphocyte response. The CC genetic constructs can also be used for in vitro production of IL-5 or - CC (Updated on 17-OCT-2003 to standardise OS field)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         유유
The sequences given in AAT50755-56 encode ovine interleukin-5 (IL-5). CC Ovine IL-5 or IL-12 are used to treat and/or prevent infections in CC livestock (esp. cows and sheep), particularly where the animals are stressed, e.g. during transport. IL-5 and IL-12 can also be used as adjuvants in vaccines for veterinary use (partic. weakly immunogenic subunit or synthetic peptide vaccines). They may also be used to treat cancer, immunosuppression and allergy, to enhance/suppress the reproductive system and to promote growth or early maturity. Optionally interleukin can be delivered from constructs or delivery cells and cantibodies are useful in enzyme immunoassays for rapid diagnosis of confection. The interleukins are immunopotentiators, especially IL-5 promotes growth of early haematopoietic progenitor cells and generation of cytotoxic cells from thymocytes, also it stimulates production and secretion of IgM and IgA (in synergism with bacterial endotoxin). IL-12 induces production of gamma-interferon by, and proliferation of, T and NK
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Cytokine; ovine; sheep; interleukin-5; interleukin-12; IL-5; IL-12; livestock; cow; stress; transport; vaccine adjuvant; veterinary; cancer; immunosuppression; altergy; reproductive system; growth; early maturity; antibody; diagnosis; immunopotentiator; early haematopoietic progenitor cell; cytotoxic cell; thymocyte; secretion; IgM; IgA; bacterial endotoxin; gamma-interferon; ss.

The ON can have antiinflammatory, antiallergic, and/or contribution. The ON can have antiinflammatory, antiallergic, and/or contribution. The ON can have antiinflammatory, antiallergic, and/or contribution of diseases associated with inflammation, contributions are compaired airways, including lung disease and diseases whose secondary conficts afflict the lungs of a subject. They can be used for treating contributions, pulmonary vasoconstriction, allergies, asthma, impeded respiration, respiratory distress syndrome, pain, cystic fibrosis, pulmonary hypertension, emphysema, chronic obstructive pulmonary disease (COPD), and cancers such as leukaemias, lymphomas, cortinomary disease (COPD), and cancers such as leukaemias, lymphomas, carcinomas, and cancers which may metastasise to the lungs, including carcinomas, and cancers. The reduction of the adenosine content of the Dreast and prostate cancer. The reduction of the adenosine content of the calculate and prostate cancer. The reduction of the adenosine receptors causing contances of deoxyadenosine which activates adenosine receptors causing contribution and inflammation.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence 816 BP;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               inflammation and inflammatory disorders. The present invention relates to an IL-5 antisense oligonucleotide (see AAA1337) which inhibits the expression of IL-5. The antisense oligonucleotide has at least one non-natural internucleoside linkage. The oligonucleotide is able to inhibit IL-5 secretion in a dose dependent manner, and is useful for inhibiting IL-5 expression and therefore treating inflammatory diseases, asthma, allergic rhinitis, allergic conjunctivitis and inflammatory skin diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  This sequence represents the human interleukin-5 (IL-5) encoding nucleotide sequence. Interleukin-5 is involved in eosinophilic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Oligonucleotide comprising non-natural internucleoside linkage, useful for inhibiting interleukin-5 expression and treating inflammatory diseases, asthma, allergic rhinitis, allergic conjunctivitis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Human; interleukin-5; IL-5; inflammatory disease; asthma; eczema; antisense oligonucleotide; allergic rhinitis; inflammatory skin d
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                AAA13338

                     The present invention describes low adenosine (A) content antisense oligonucleotides and compositions (I) compilsing them. In the antisense oligonucleotides the A is replaced by a 'Universal' or alternative base. (I) can have respiratory, bronchodilator, antiinflammatory, analyesic, immunosuppressive, antiasthmatic, hypotensive and cytostatic activities. The antisense oligonucleotides and (I) can be used to down-regulate the expression and or activity of target polypeptides associated with lung/respiratory disorders and malignancies, such as stimulating and activating peptide factors and transmitters, transcription factors,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              low adenosine antisense oligonucleotide; phosphorothioate; allergy; human; alrway disorder; bronchoconstriction; lung inflammation; surfactant depletion; respiratory; bronchodilator; antiinflammattory; immunosuppressive; antiasthmatic; analgesic; hypotensive; cytostatic; respiratory obstruction; pulmonary obstruction; pulmonary impeded respiration; surfactant hypoproduction; pulmonary obstruction; asthma; RDS; respiratory distress syndrome; pain; cystic fibrosis; allergic rhinitis; pulmonary hypertension; emphysema; pulmonary transplantation rejection;
                                                                                                                                                                                                                                                                                                                                                                                                                                                    Low adenosine (A) content antisense oligonucleotides which do not trigger adenosine receptors during metabolism, useful e.g. for treating cancers and respiratory obstructions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                14-MAR-2001

                                                                                                                                                                                                                                                                                                                                              transmitters, defensins, growth factors, vascactive peptides and receptors, binding proteins and malignancy associated proteins. The antisense oligonucleotides may be treat disorders including respiratory obstruction (especially pulmonary obstruction and/or bronchoconstriction) and/or lung inflammation, allergy(ies) and/or surfactant hypoproduction which are associated with a disease or condition selected from pulmonary vasoconstriction, inflammation, allergies, asthma, impeded respiration, respiratory distress syndrome (RDS), pain, cystic fibrosis (CP), allergie rhinitis (AR), pulmonary hypertension, emphysema, chronic obstructive pulmonary distress (COPD), pulmonary transplantation rejection, pulmonary infections, bronchitis, and/or cancer. AAP18434 to AAF21543 represent human polynucleotide the processor inventors and antisense oligonucleotides used in the exemplification of the processor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    chemokines, endogenously produced specific and non-specific enzymes, binding proteins, adhesion molecules and their receptors, cytokine and chemokine receptors, adenosine receptors, bradykinin receptors, central nervous system (CNS) and peripheral nervous and non-nervous system receptors, CNS and peripheral nervous and non-nervous system peptide
                                                                                                                                                                                                                                                                                                 Sequence 816 BP;

Specifically, it refers to CC the identification of genes that have a clinical utility as diagnostic CC tools for the management of, in particular, patients with systemic lupus CC exythematosis (SLE) or rheumatoid arthritis (RA). Accordingly, the CC present invention describes a method for determining the levels of CC multiple differentially expressed genes of a patient, in a concerted CC manner, in order to achieve an improved diagnostic assay with sensitivity CC and specificity for the disease in question. As such, these genes are CC useful for the diagnosis of various other inflammatory disorders concluding cholecystitis, Sjogren's disease, CREST syndrome, sclerosing CC including spondylitis, ulcerative collitis, primary sclerosing CC cholangitis, appendicitis, diverticulitis, and primary biliary sclerosis. This polynucleotide is a DNA sequence representing human mRNA that is CC of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                       No.:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Diagnosing or monitoring autoimmune and chronic inflammatory diseases, such as rheumatoid arthritis, systemic lupus erythematosus, ulcerative colitis, psoriasis and asthma by detecting the expression level of one
